USA. Palladium Technologies on largest Newcastle Marine megayacht

Tuesday, 20 September 2011

Originally envisioned at just 164' Newcastle Marine launched M/Y Harbour Island earlier in the month in anticipation of her debut in the Fort Lauderdale International Boat Show. The new superyacht is now Newcastle's largest build to-date at 181' LOA and a 34' beam. After her debut she is expected to be available to the Caribbean charter market boasting six staterooms which include two master suites and an eye-catching infinity pool for its discriminating guests.

Palladium provided the award-winning SiMON monitoring, control and alarm system with five monitoring stations which are located on the bridge, port and starboard, engine room, engineer's cabin, crew area, along with the Captain's laptop. Some of the interfaces include the Atlas shorepower, Cat CCM engines, Kilopak generators, Quantum hydraulics, along with fire, HVAC, tanks, bilges, batteries, refrigeration and steering systems. All of which meet classification for ABS Maltese Cross A1 YS, AMS with MCA certification.

Palladium also provided a custom navigation mimic panel that was designed to complement the rich wood details on the interiors for the bridge as well. This panel presents detailed information on the status of navigation lights as well as door security and bilges, complete with alarm acknowledgements.
